## EXPERIENCE

### Web Developer (Freelance)

#### *Bedo-Design Jan 2024 – Frontend-Developer*

I worked as a frontend-developer where I built different web applications from e-commerce to simple dynamic and responsive websites. I used React.js framework to build my single page components to provide different functionalities like Login and Signup components and then user authentication using JWT Token. Similarly adding payment gateway to the page and also an admin panel where users can check the order update and manage the orders. For the database I used MongoDb to store the users data. For simple websites developed responsive design for all the pages and gave new animations for a dynamic layout.

### Software Engineering Intern

#### *Code Store June 2022 – Quality Analyst Intern*

I worked as a Quality Analyst where I learned about manual testing as well as automation testing. The main focus was to view different web-applications and write their test cases, test scenarios, and their functionality to see if they are working as per their requirements. Generated different bug reports and bug test cases on how it is impacting on the UI/UX.

## EDUCATION

### Bachelor of Technology - Computer Science May 2023 ICFAI University, Dehradun - **GPA: 7/10**

### Secondary School 2017-2019 Maharani Geeta Prabhath. Percentage - 60% **Matriculation** 2016

Don Bosco Academy Percentage - 67%
